

1. Two Sum

Easy 🔖 Topics 🔒 Companies 💡 Hint

Given an array of integers `nums` and an integer `target`, return *indices of the two numbers such that they add up to `target`*.

You may assume that each input would have **exactly one solution**, and you may not use the *same* element twice.

You can return the answer in any order.

Example 1:

Input: `nums = [2,7,11,15]`, `target = 9`**Output:** `[0,1]`**Explanation:** Because `nums[0] + nums[1] == 9`, we return `[0, 1]`.

Example 2:

Input: `nums = [3,2,4]`, `target = 6`**Output:** `[1,2]`

Example 3:

Input: `nums = [3,3]`, `target = 6`**Output:** `[0,1]`

2     pu
3
4
5
6
7
8
9
10
```

Ln 1, Col 1 Sav

✓ Testcase

Case 1

`nums =``[2,7,11,:``target =``9`
